

Tex's Bird Feeders

Be sure to ask your parents for help when working on this!

Ingredients:

- empty water bottles
- bird seed
- sticks or old pencils
- string
- drill for drilling holes

Directions:

Step 1:

Have an adult help you drill about 3-4 sets of small holes (across from each other so that a pencil can be slid through) into the water bottles

Step 2:

Then drill about 4-5 random holes for the birds to get the bird seed from. Take the sticks or pencils and put them through the original sets of holes so that there are a pencil poking out on both sides of the water bottle for the birds to land on.

Step 3:

Now fill the bottle with small bird seed.

Step 4:

Screw the cap on tightly. Grab the string and tie a long piece around the neck of the bottle and attach the bird feeder to a tree. Enjoy watching birds flock to this feeder!
